

EDUCATION

• Misr University for Science and Technology

Bachelor's degree in Computer Science 3rd

Giza, Egypt

Oct 2023 – July 2027

EXPERIENCE

• OSC MUST

Founder / President

On-Site

Nov 2025 – Present

- **Founder & Strategic Lead:** Founded and scaled a university open source community focused on systems programming and software engineering. Led vision, structured operations, and drove technical growth initiatives.
- **Technical Mentor:** Delivered sessions on Linux, UNIX Philosophy, and open source workflows while mentoring members in Git collaboration, and real-world project development.

• SaiKet Systems

C/C++ Programming Intern

Remote

July 2025 – Aug 2025

- **C/C++ Developer:** As a C/C++ developer intern, I was responsible for developing high-quality, maintainable TUI and GUI application using **GTK** library for the GUI components and **ncurses** library for TUI. My work also involved implementing efficient **data structure** and **algorithms** for core logic, designing **file manipulation and editing algorithms**, and creating user interfaces aligned with the program's functionality.

• Fayoum Oncology Center

IT intern

On-Site

July 2025 – Aug 2025

- **General IT Intern:** In this role, I worked with big data and gained hands-on experience with large-scale organizational systems. I explored how inventory management systems operate and learned about hardware components related to networking. This included configuring and managing network services across the hospital, working with access points, rack servers, and other essential networking infrastructure.

• Outlier

Coding Expertise for AI Training

Remote

Nov 2024 – Present

- **Reviewer:** As a reviewer, my role was to rank and evaluate contributors and then decide whether a task was good enough to be approved or not.
- **Contributor:** In this role, I enhance Large Language Models (LLMs) by designing coding tasks, crafting prompts, and evaluating responses to ensure model improvement. My work includes testing and validating code, ranking and refining outputs, and iteratively guiding the model toward optimal performance in real-world coding scenarios.

• MUST ICPC COMMUNITY

Coding Instructor

Giza, Egypt

Sep 2024 – Sep 2025

- **Sessions:** Sessions were almost the main part of this role as a coding instructor to my college mates. I prepared my sessions by creating a LaTeX file for the content and integrating tools like Vim and Zathura, while also solving various types of problems during the sessions.

• Peer Tutor

Personal teacher

Hybird

Summer 2023 – Nov 2024

- **DSA:** Provide one-on-one and group sessions to my peers, helping them understand complex concepts like Data Structures and Algorithms and apply them to real-world projects to ensure the idea was effectively conveyed.
- **STEM subjects:** I also delivered sessions on STEM subjects such as Math, Physics, and Chemistry, interpreting complex concepts and paving the way for students to build a strong foundation in these topics.

PROJECTS

• Personal Blog:

I created an entire personal blog from scratch without using any templates, and here is the main focus of this project:

- Utilized a C program/Shell script to fully automate the website, whether it is a blog creation or updating any information in it.
- Successfully maintained a compact website size, keeping it under 8KB.

• Inventory Management System:

a simple text-based application written in **C** using the **ncurses** library, designed to help users manage inventory efficiently:

- Developed a **terminal-based** inventory management system in **C**, implementing efficient **CRUD** operations and search logic.
- Designed an **interactive TUI** using **ncurses**, with clear separation between UI and core business logic.
- Implemented file-based persistence to ensure reliable data storage and retrieval on Unix-Like systems.
- Documented the full build workflow and project details through a **Makefile**.
- **TUI To-Do List**: a lightweight text-based task management application written in **C**, focused on usability, efficiency, and persistence:
 - Developed a **terminal-based TUI** to-do list application in **C**, supporting task creation, completion and deletion.
 - Designed an **interactive text user interface**, applying structured program flow and separation between UI and core logic.
 - Implemented **file-based persistence** to maintain task data across program executions on Unix-Like systems.
 - Documented the build workflow using a **Makefile**.
- **GUI Calculator**: a simple graphical calculator application written in **C** using the **gtk** library, built with structured logic and modular design:
 - Developed a **GUI calculator** in **C** featuring basic arithmetic operations and clear separation between UI and core logic.
 - Implemented event handling and input processing to support interactive button controls and real-time result updates.

SKILLS

- **Languages**: C++, Python, C, Java, HTML, CSS, Javascript, MySQL, LaTeX, Bash, Vim, Linux, Git
